AL RABEEH DENTAL CENTER

Reception Login
Software Development Blueprint

Reception Login Software Development Blueprint

Al Rabeeh Dental Center

Part 1 of the clinic software specification | Revised 19 October 2026

Prepared for a software development company to estimate, design, build and test the Reception Login. The clinic plans three user logins: Reception, Doctors and Administration. This document specifies Reception and the shared interfaces it needs; full Doctor and Administration specifications will be added when their details are supplied.

Dashboard is the default window after login for Reception, Doctors and Administration. The supplied Excel notes define the detailed requirements and the images illustrate the intended layouts. Conflicts and missing definitions are listed for confirmation.

Contents and source register

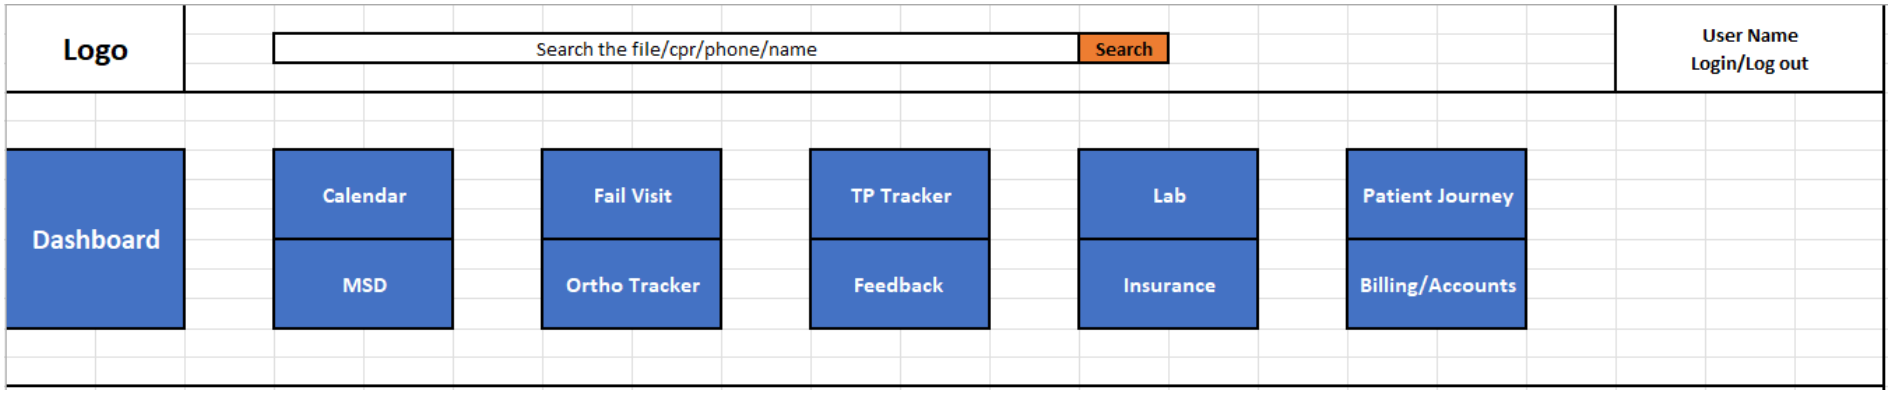

Section	Module	Detailed source	Models
1	Dashboard	Dashboard/Dashboard.xlsx all seven sheets	2
2	Calendar	Calendar/Calender.xlsx Sheet1	5
3	MSD	MSD/MSD RECEPTION.png image only	1
4	Fail Visit	Fail Visit/Fail Visit.xlsx Sheet1	1
5	Ortho Tracker	Ortho Tracker/ORTHO TRACKER.xlsx Sheet1	1
6	TP Tracker	TP Tracker/tp tracker.xlsx Sheet1	1
7	Feedback	Feedback/FEED BACK CALL-reception.xlsx Sheet1	1
8	Lab	Lab/Lab.xlsx all four sheets	3
9	Insurance	Insurance/Insurance.xlsx all three sheets	2
10	Patient Journey	Patient Journey/PT Journey.xlsx Sheet1	1
11	Billing/Accounts	Billing/Billing.xlsx Billing	1

Required module order for every login: Dashboard → Calendar → MSD → Fail Visit → Ortho Tracker → TP Tracker → Feedback → Lab → Insurance → Patient Journey → Billing/Accounts. The reference images show earlier menu arrangements; this sequence takes precedence over those layouts.

Blueprint contents

Shared software behavior; module requirements and images.

Shared software behavior

Earlier Reception navigation model. Dashboard is the default; the module sequence in this blueprint takes precedence.

CORE-01 Use individual authenticated user accounts for Reception, Doctors and Administration. Administration includes the Manager function referenced in the workbooks; it is not a fourth top-level login.

CORE-02 Open Dashboard immediately after login for all three roles: Reception, Doctors and Administration. Use the same module order throughout the software: Dashboard, Calendar, MSD, Fail Visit, Ortho Tracker, TP Tracker, Feedback, Lab, Insurance, Patient Journey, Billing/Accounts.

CORE-03 Global patient search supports File No., CPR, Phone and Name. Resolve results to one shared patient record. The six performance trackers require no duplicate mobile or CPR input.

CORE-04 The software must use a dark blue and orange theme with the official Al Rabeeh Dental Center logo. Use white backgrounds, dark blue navigation and table headers, orange action buttons and highlights, and readable status labels with their specified colors. Apply the theme consistently across all three logins.

CORE-05 Synchronize shared Calendar, patient, treatment, follow-up, lab, billing and insurance records between the three roles. Status changes must update the relevant list, count, reminder and linked checklist.

CORE-06 Store patient file and CPR identifiers as text to preserve leading zeros. Use Bahrain local dates and times in the UI and decimal BHD amounts; agree rounding at procedure, invoice and receipt level.

CORE-07 Separate appointment status, procedure status, call outcome, task completion, administrative approval and target achievement. Similar labels in different modules do not make them the same status field.

CORE-08 Proposed technical rule: enforce permissions on the server, preserve a timestamped audit history with actor, previous value and new value, and protect sensitive records and attachments. The exact security, hosting and backup design is a vendor deliverable to agree with the clinic.

CORE-09 Proposed technical rule: use stable patient, appointment, encounter, procedure, invoice, claim, payment, lab-job and call-action IDs. Treat retries and repeated transfer actions safely so they do not create duplicate records or count a financial amount twice.

1 Dashboard

Source Dashboard/Dashboard.xlsx all seven sheets

Logic overview The reception dashboard gives each receptionist an overview of their daily and month-to-date performance against targets for calls, collections, Instagram, Google reviews, Dental-to-Ortho and Ortho-to-Dental conversions, showing achieved targets in green and unachieved targets in red. It also provides patient search, access to reception modules, admin announcements, daily/weekly/monthly tasks, due notifications and six-month target-versus-actual graphs.

DASH-01 Dashboard is the default window after login for Reception, Doctors and Administration. The Reception Dashboard displays receptionist name, photograph, login and logout controls, patient search, an Administration announcement area, performance cards, task lists and reminders.

DASH-02 Provide separate Calls, Collection, Instagram, Google Review, Dental to Ortho and Ortho to Dental cards. Each has Actual, Target and Status for Today and Till Date. Calls also has Seen Pt, meaning patients who came to the clinic. Each card opens its own entry window and saved-record list with Add and View Details controls.

DASH-03 Only Administration-approved performance data may contribute to these counts, amounts and graphs. Approved is green, Rejected is red and Hold is orange. Target achievement is a separate status: Achieved is green and Not Achieved is red. Do not substitute approval status for target achievement.

DASH-04 Each performance card has its own independent date filter: From and To, Monthly, Weekly and Yesterday. Filtering Calls must not change Collection or another card. Under a Yesterday filter, the Today area represents Yesterday. For another date or a multi-day selection, the source requires Today and Till Date to show the same filtered result. Agree the default Till Date period and label handling before development.

DASH-05 Provide a graph for each of the six work areas, including the supplied last-six-month Target versus Actual layout. Preserve the target and actual legend, period labels and View Details behavior. The Excel also contains an Actual versus Target gauge reference.

DASH-06 Show appointment-due reminders from the Calls tracker. Display dated Administration or Manager comments from each work section and allow Reception to reply.

DASH-07 Show Daily, Weekly and Monthly task summaries for Today and Till Date with Completed, Not Completed and Partially Completed counts. Each task group has its own date filter. Show lists containing Task No., Task and Status.

DASH-08 Administration or Manager creates, edits and deletes assigned daily, weekly and monthly tasks. Reception may update their status only, and must not add, edit the task definition or delete these tasks.

DASH-09 Daily task due dates recur every day; weekly tasks require a selected weekday; monthly tasks require a selected date. Each has a due date. Show popup reminders and every pending item in the Task Due Reminder section. Agree the behavior for a monthly date absent from a particular month.

DASH-10 Provide a separate Personal Task list. Reception may add and remove their own personal tasks and select personal due dates. Personal tasks must remain distinct from Administration-assigned tasks.

DASH-11 No general report or reporting dashboard is required in Reception Login. Explicit Insurance PDF, Excel and Print actions and Billing Print are module-specific exceptions already present in the supplied sources.

DASH-12 For all six entry trackers, show the saved records below the entry form. Include Administration or Manager comments, Edit and Delete controls and an Audit action. Reception editing is limited to 24 hours. Record all actions in an audit trail. Confirm the deletion limit, the clock start and handling of held records after 24 hours.

DASH-13 For Hold, show a reminder that correction or update is needed. For Rejected, show the rejection and its reason. The source asks both to appear in the reminder area. Rejected and held records must remain excluded from approved performance totals.

DASH-14 Do not ask Reception to re-enter mobile or CPR in these six work trackers. Resolve the existing patient by file number; Calls also shows the name. Use an internal patient record key for relationships, while retaining the source's visible file-number identification.

Calls entry and list

Entry fields: Date defaulted to today, File No., Name, Status, Call Category, Remarks and Appointment Date with calendar selection. List columns: SL No., Date, File No., Name, Status, Call Category, Remarks, Appointment Date, Appointment Due, Admin Status, Edit or Delete, Audit and Admin or Manager Comment. Appointment Due is generated from Appointment Date. Call statuses: Scheduled, Pre-Confirmed, Confirmed, Not Confirmed, No Ans 1, No Ans 2, Fail Visit or Postponed, Cancelled and Seen. Categories: Today Chart, Tomorrow Chart, Fail Visit, Feedback, TP Calls, Ortho Calls, Missing PT and Payment Pending. Keep Seen available to count patients who attended.

Collection entry and list

Fields: Date, File No., Doctor, Treatment, Total Amount, Total Paid, Discount, Balance, Account Clearance, Next Appointment and Service Note. List contains SL No. and all these fields plus Admin Status, Edit or Delete, Audit and Admin or Manager Comment. The embedded drawing supplies Done and Not Done for Account Clearance, Next Appointment and Service Note. The form incorrectly places =TODAY() beside File No.; preserve separate Date and File No. fields. Confirm whether Total Amount is before or after discount and how Balance is calculated. Link actual billing receipts so this manual performance record does not create a second financial transaction.

Instagram entry and list

Fields: Date defaulted to today, File No. and Insta ID. List: SL No., Date, File No., ID, Admin Status, Edit or Delete, Audit and Admin or Manager Comment. Keep this tracker separate from Google Review.

Google Review entry and list

Fields: Date defaulted to today, File No. and ID. The source labels the last entry field Insta ID even on Google Review; the intended Google reviewer identity or review reference must be confirmed. List: SL No., Date, File No., ID, Admin Status, Edit or Delete, Audit and Admin or Manager Comment. Keep this tracker separate from Instagram.

Dental to Ortho entry and list

Fields: Date defaulted to today, File No. and Status with Started or Not Started. If Started, capture Bracket and Amount. List: Date, File No., Status, If Started Bracket, If Started Amount, Admin Status, Edit or Delete, Audit and Admin or Manager Comment. Confirm whether conversion achievement counts only Started or every approved entry.

Ortho to Dental entry and list

Fields: Date defaulted to today, File No., Ortho Doctor, Dental Doctor, Treatment and Amount. List contains these fields plus Admin Status, Edit or Delete, Audit and Admin or Manager Comment. Confirm the event that qualifies as a completed conversion.

Dashboard and performance trackers visual reference 1

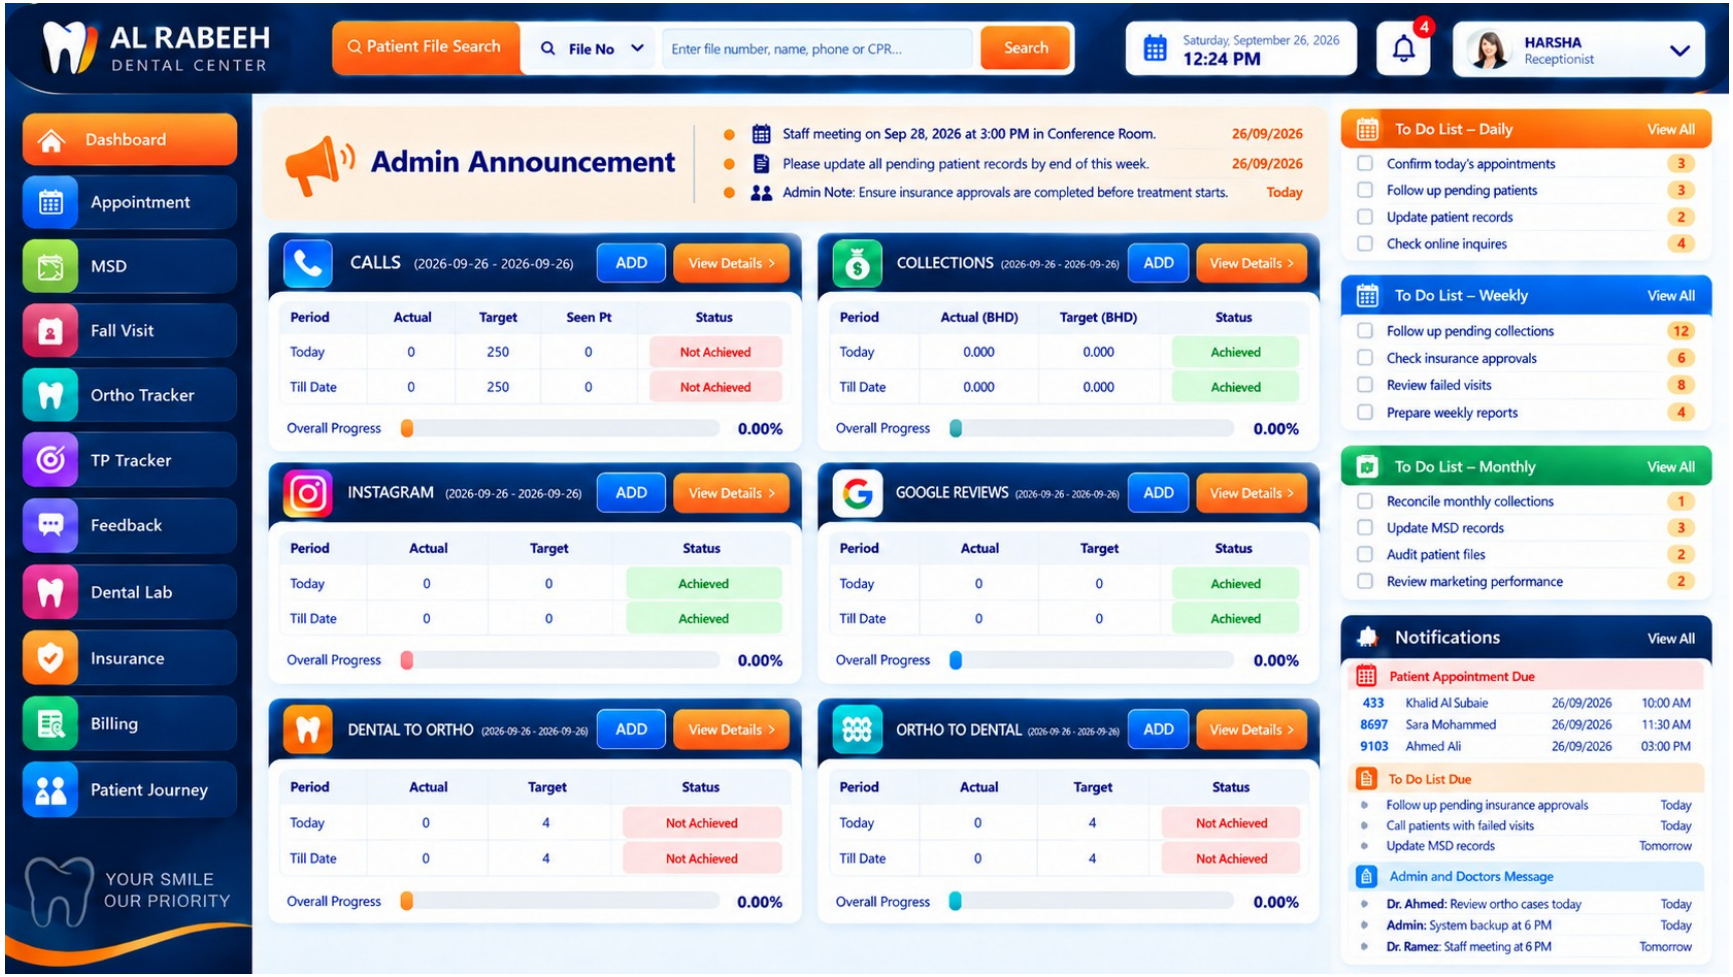

Figure 1 Dashboard/DASHBOARD-1.png

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

Dashboard and performance trackers visual reference 2

Figure 2 Dashboard/DASHBOARD-2.png

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

2 Calendar

Source Calendar/Calender.xlsx Sheet1

Logic overview The calendar displays appointments by doctor and time for the selected date, including doctor duty hours, patient names, file numbers, procedures and colour-coded appointment statuses, with patient totals and status counts updated automatically. Reception can search patients, navigate between dates, and open appointments to view or update their details and status. Individual and bulk WhatsApp options allow appointment messages to be sent, with indicators showing sent, not sent or failed delivery.

CAL-01 Open Calendar from the module menu. When Calendar opens, default to Today in Bahrain local time. Provide Yesterday, Today and Tomorrow controls and date navigation. Arrange appointments by time in doctor columns.

CAL-02 Display doctor photographs and duty hours above the relevant calendar column. Support monthly and daily doctor duty schedules with editing options. The permission to edit doctor schedules must be agreed under Administration access.

CAL-03 Allow dragging appointments to another time or doctor. Show a confirmation popup before committing the move. Allow increasing or decreasing appointment duration by dragging its length. Warn when an appointment falls outside the doctor's working time.

CAL-04 Provide a sidebar that can be maximized and minimized. Use the supplied Reception navigation consistently even where older models show Manager or different menu labels.

CAL-05 Provide appointment status headings and counts for Scheduled, Pre-Confirmed, Confirmed, Coming, Arrived, Patient Left, In Room, Seen, No Ans 1, No Ans 2, Fail Visit, Not Confirmed, Cancelled, Break, Call for Payment and Home Visit. Clicking a count must expose the associated appointments or patient details.

CAL-06 Show counts and patient details for Total Appointments, New Patients, Dental Patients and Ortho Patients. Confirm whether these are appointment counts or distinct patient counts and whether categories overlap before implementation.

CAL-07 Appointment registration fields are Provider or Doctor, Service, Status, Date and Time. The service list must support the requested update. The model includes From and To times, Clear, Cancel, Close and Create Appointment controls, and a patient summary showing age, gender and last visit.

CAL-08 Support patient search by file number, CPR, phone or name. Provide Search Patient and New Patient options in the booking window, corresponding to the main patient search.

CAL-09 Support manual registration and CPR card-reader registration. Provide CPR reading both in appointment view and in the patient file. Allow a CPR update for a manually created file.

CAL-10 Do not create a patient file until a proper phone number is supplied. Show a popup when the phone is missing or invalid. The exact accepted phone formats must be agreed with the clinic.

CAL-11 Provide selectable Email, SMS and WhatsApp channels for patient communication. The Calendar models include bulk WhatsApp and per-appointment message indicators: Message Sent, Not Sent and Failed or Not Delivered. Preserve delivery history and prevent an unconfirmed selection from sending a message.

CAL-12 Provide the Fail Visit transfer system or button. Coordinate it with the previous-day transfer rules in the Fail Visit module; repeat transfer must not create duplicate follow-up records.

Calendar visual reference 1

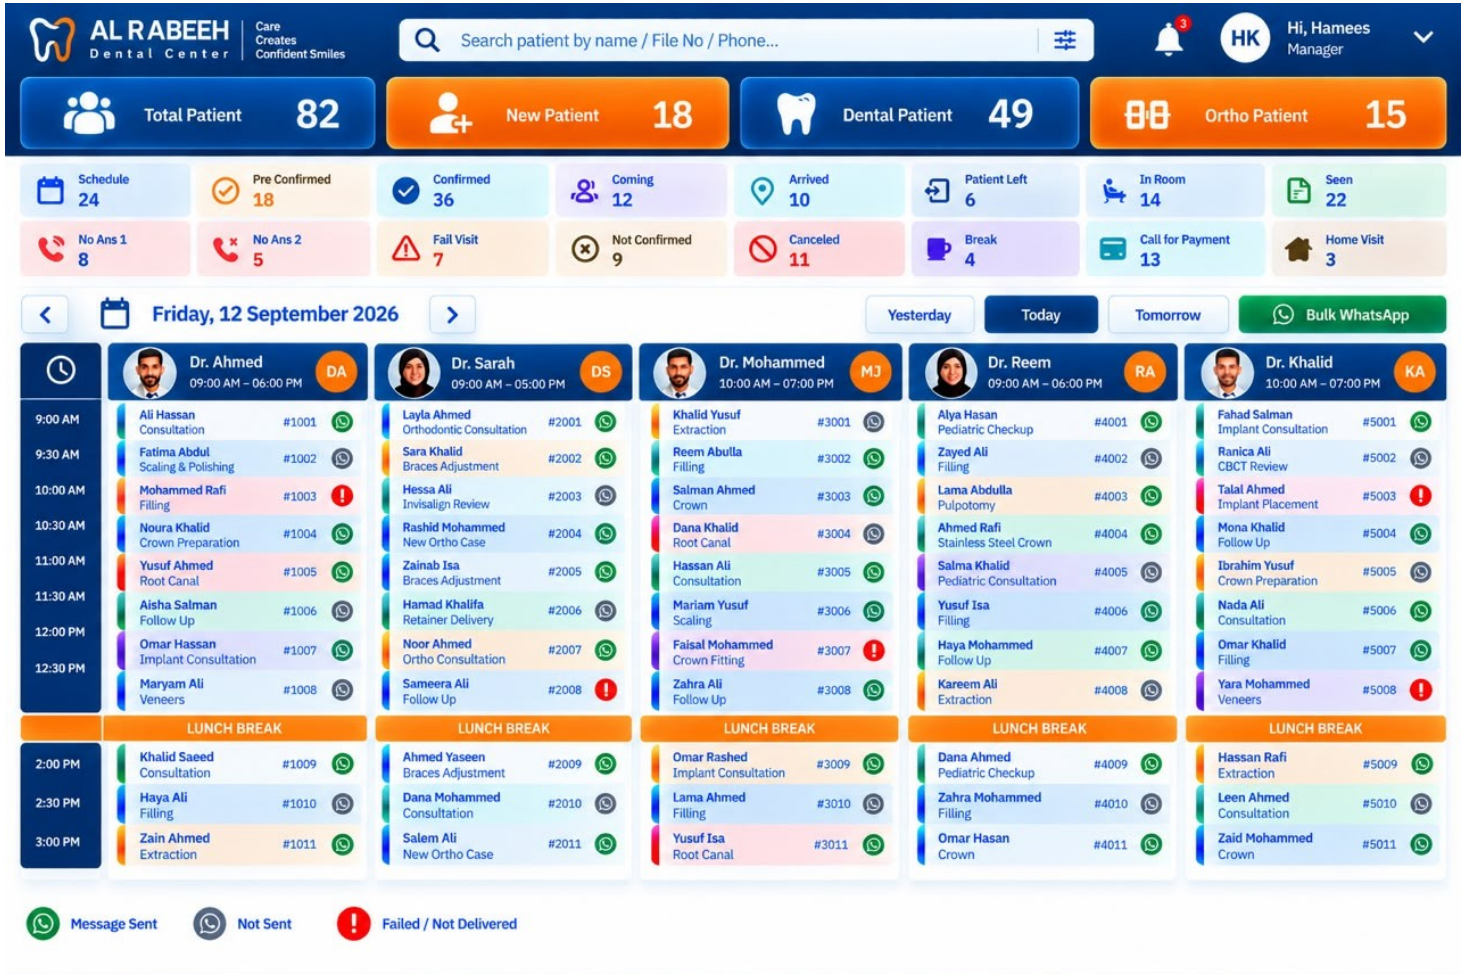

Figure 3 Calendar/Calendar View 4.jpeg

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

Calendar visual reference 2

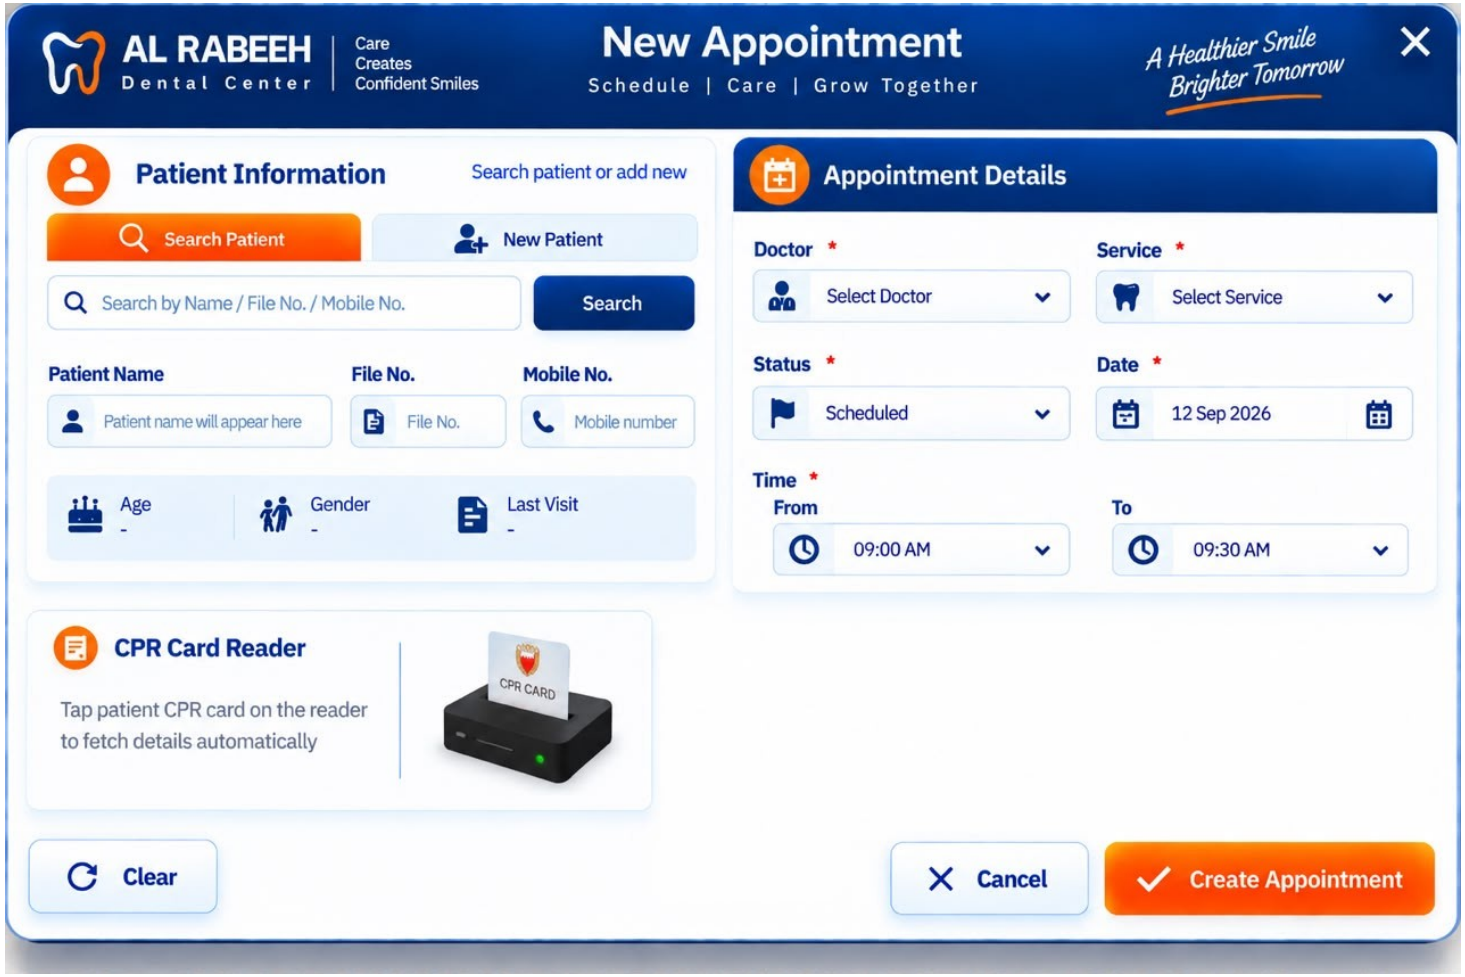

Figure 4 Calendar/Appointment Creating View.jpeg

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

Calendar visual reference 3

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

Calendar visual reference 4

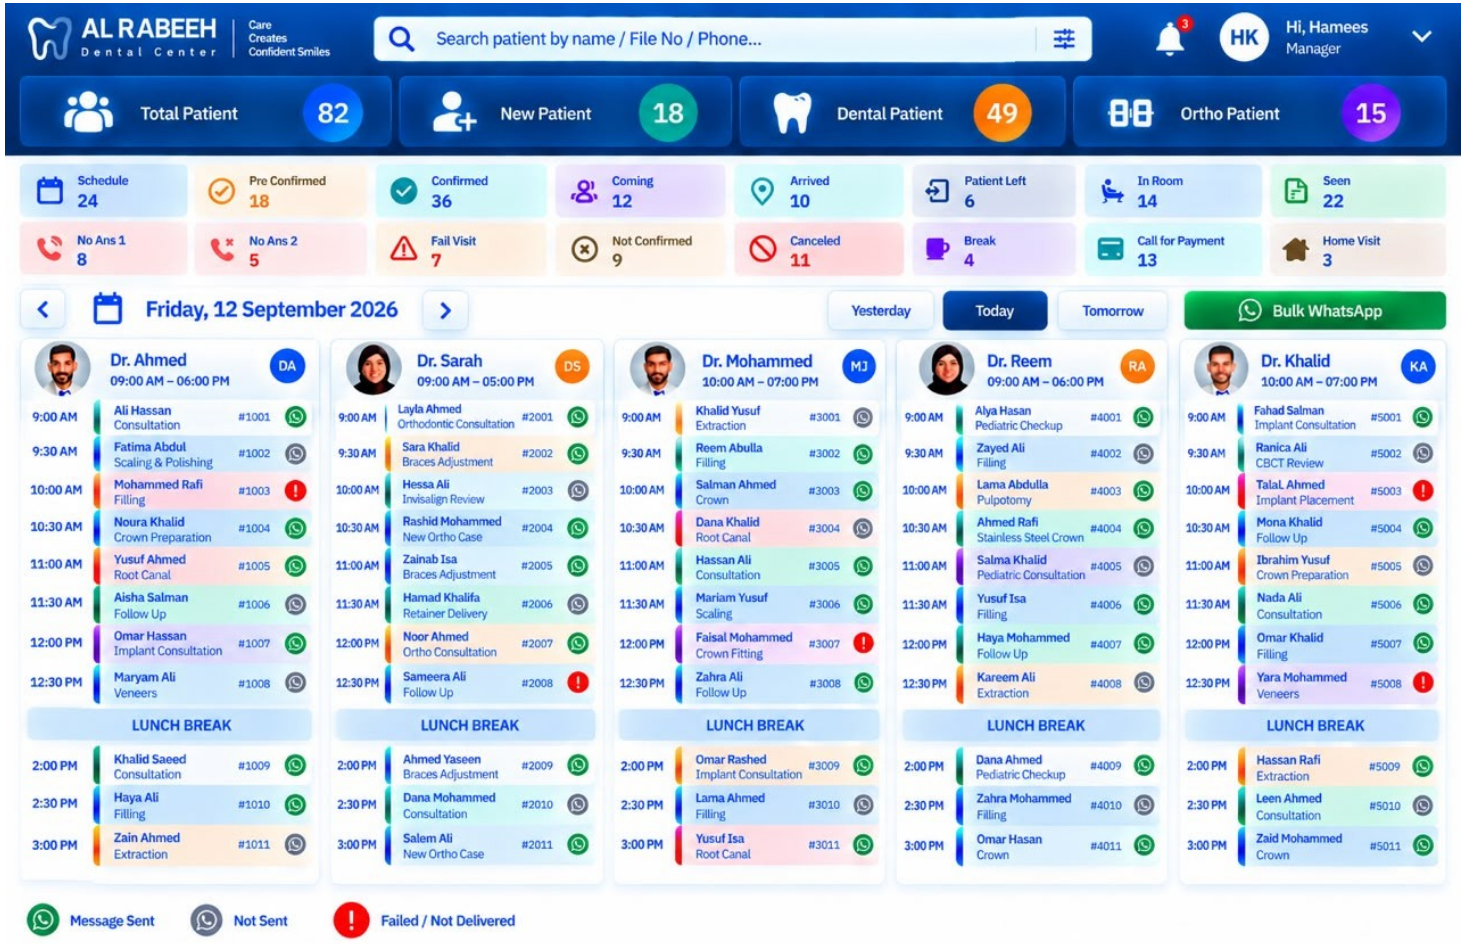

Figure 6 Calendar/Calendar View 2.jpeg

Calendar View 1 and Calendar View 2 are byte-identical in the supplied package. Both filenames are retained for completeness.

Calendar visual reference 5

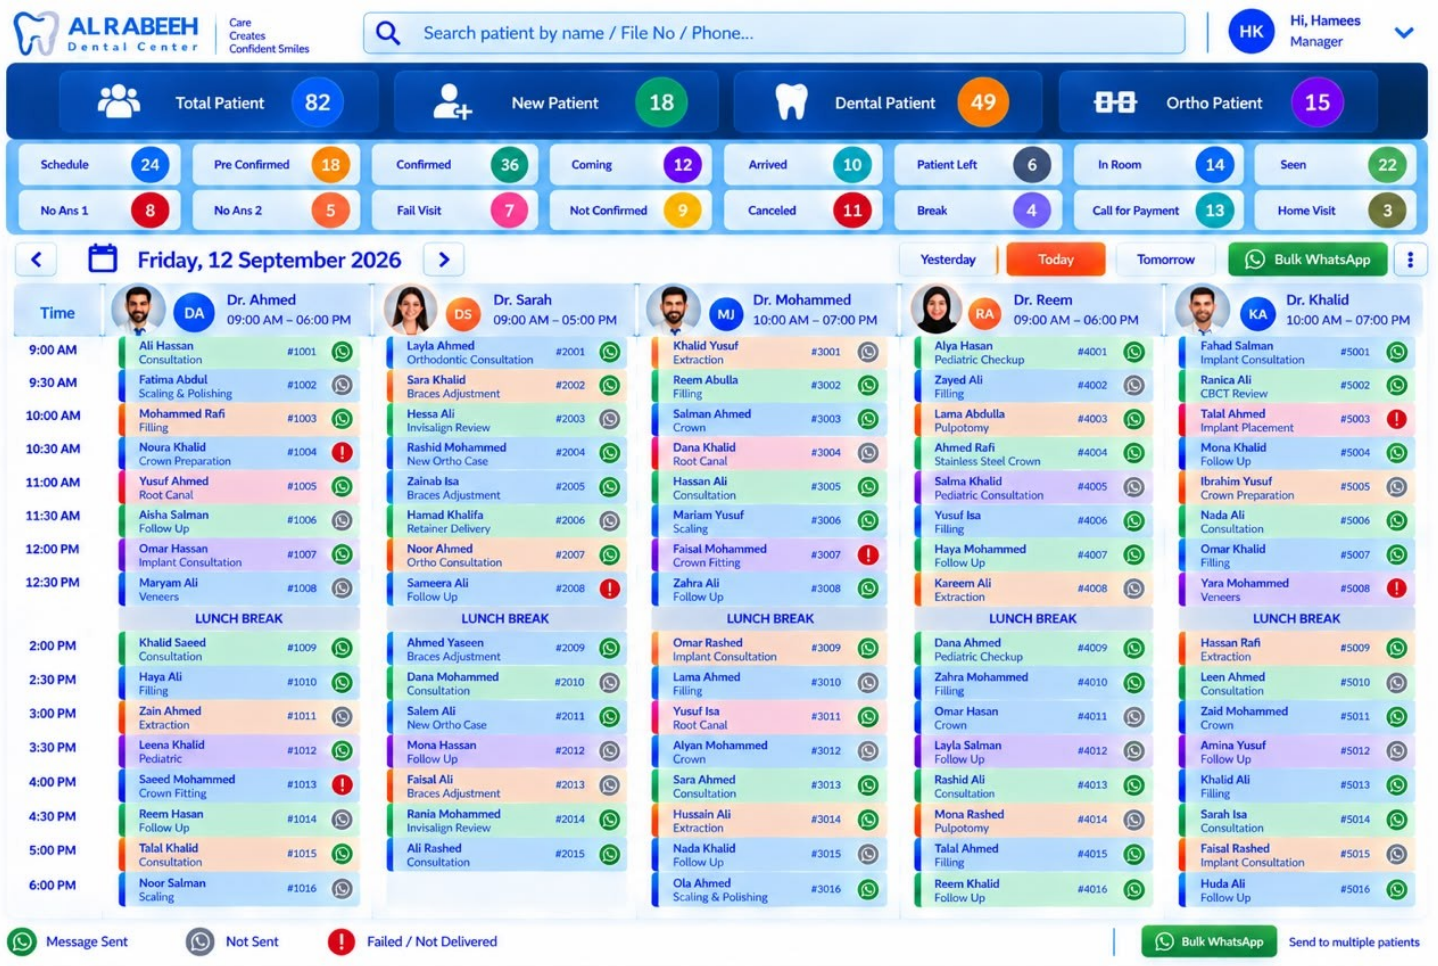

Figure 7 Calendar/Calendar View 3.jpeg

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

3 MSD

Source MSD/MSD RECEPTION.png image only

Logic overview The Missing Schedule (MSD) tracker automatically lists patients who require further treatment, review or payment follow-up but have no next appointment booked, helping reception identify appointments that were forgotten or missed during scheduling. Patients can be filtered by date, doctor and treatment category, with their last appointment, file number, procedures and responsible receptionist displayed for follow-up. Once the required appointment is booked through the Appointment button, the patient is removed from the active MSD list and the counts update automatically.

MSD-01 Automatically list patients who require further treatment, review or payment follow-up and have no next appointment booked.

MSD-02 Include global file, CPR, phone or name search, Date Filter, Doctor Filter, treatment-category filtering, receptionist identity and notifications.

MSD-03 Provide seven count cards: In Progress Dental, In Progress Ortho, Decided Plan Dental, Decided Plan Ortho, Balance Payment Dental, Balance Payment Ortho and Completed With TP Ortho. Retain the source category labels until the final eligibility definitions are confirmed.

MSD-04 Show SL No., Last Appointment Date, File No., Patient Photo, Patient Name, responsible Receptionist, Procedures and Appointment action. Booking the required appointment removes the patient from the active MSD list and updates its counts automatically.

MSD-05 Confirm the date field used by the filter, whether category cards overlap and the meaning of Completed With TP Ortho. Apply MSD-01 for inclusion and MSD-04 for removal.

Missing Schedule MSD visual reference 1

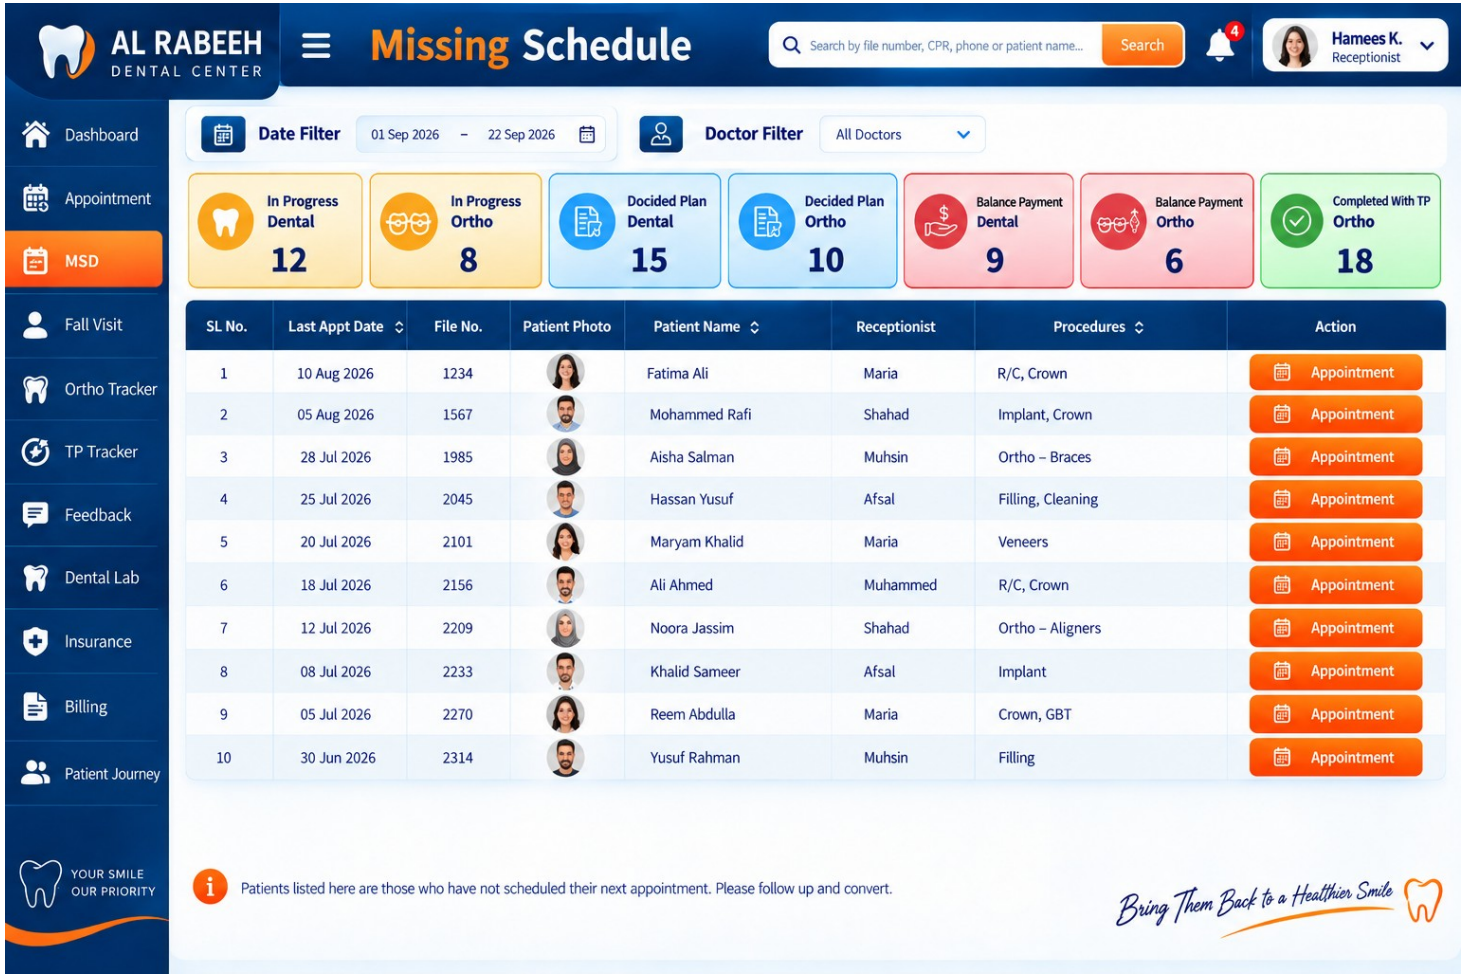

Figure 8 MSD/MSD RECEPTION.png

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

4 Fail Visit

Source **Fail Visit/Fail Visit.xlsx Sheet1**

Logic overview The Fail Visit tracker lists patients who had an appointment but did not attend; yesterday's appointments remaining in Schedule, Pre-Confirmed, Coming, Confirmed, Not Confirmed, No Ans 1 or No Ans 2 must change to Fail Visit and appear in today's tracker, either automatically or through a button in yesterday's calendar, without creating duplicates. Reception can continuously record call attempts, follow-up outcomes, comments and reminders, with filters by date, doctor and call status. Patients remain in active follow-up until rescheduled or closed with a recorded reason, while their missed appointment and call history are preserved.

FV-01 Yesterday's unattended Calendar appointments remaining in Scheduled, Pre-Confirmed, Coming, Confirmed, Not Confirmed, No Ans 1 or No Ans 2 must change to Fail Visit and appear in today's tracker, automatically or through a button in Yesterday Calendar. Prevent duplicates. Continue follow-up until rescheduled or closed with a recorded reason; preserve missed-appointment details and call history.

FV-02 Provide global search by file, CPR, phone or name, Date Filter, available-doctor dropdown and selected-doctor photograph.

FV-03 For the selected doctor, show Total PT for yesterday's failed visits, Calls Done and Pending equal to Total PT minus Calls Done. Provide an All Doctors panel with till-date Total PT, Calls Done and Pending. The sheet also states that the All Doctors area is based on Date Filter; the final period rule must resolve this conflict.

FV-04 Provide status count buttons for Schedule, No Ans 1, No Ans 2, No Ans 3, Remind Later, Call Back Us, Cancelled, SMS or WhatsApp, Patient Did From Outside and Not Aware TP. Refresh counts after a status change and open the matching patient list when clicked.

FV-05 The editable call list contains SL No., Date, File No., Patient Photo, PT First Name, Doctor Photo, Receptionist, Status, Comment, Save and Appointment. Automatically attribute a saved status update to the logged-in receptionist. Comments are editable text.

FV-06 The main image also shows CPR, Phone, Doctor and Procedure or Service, sorting indicators, pagination and an empty state. Retain these model fields alongside the editable call-list fields; confirm whether they appear on the main list or the separate call window.

FV-07 Disable Appointment when the patient already has a future appointment. Enable it when no future appointment exists. Clicking an enabled button opens booking for that patient.

FV-08 Call List must open a new window. The sheet says its design is in the next tab, but Sheet2 and Sheet3 are empty. Preserve this missing-design item for resolution.

FV-09 Use the embedded date-filter reference: Today, Yesterday, Tomorrow, Day After Tomorrow, Next 7 Days, Last 7 Days, Last 30 Days, This Month, Last Month and Custom Range, with From, To, Apply and Cancel. Confirm inclusivity of rolling date presets.

Fail Visit visual reference 1

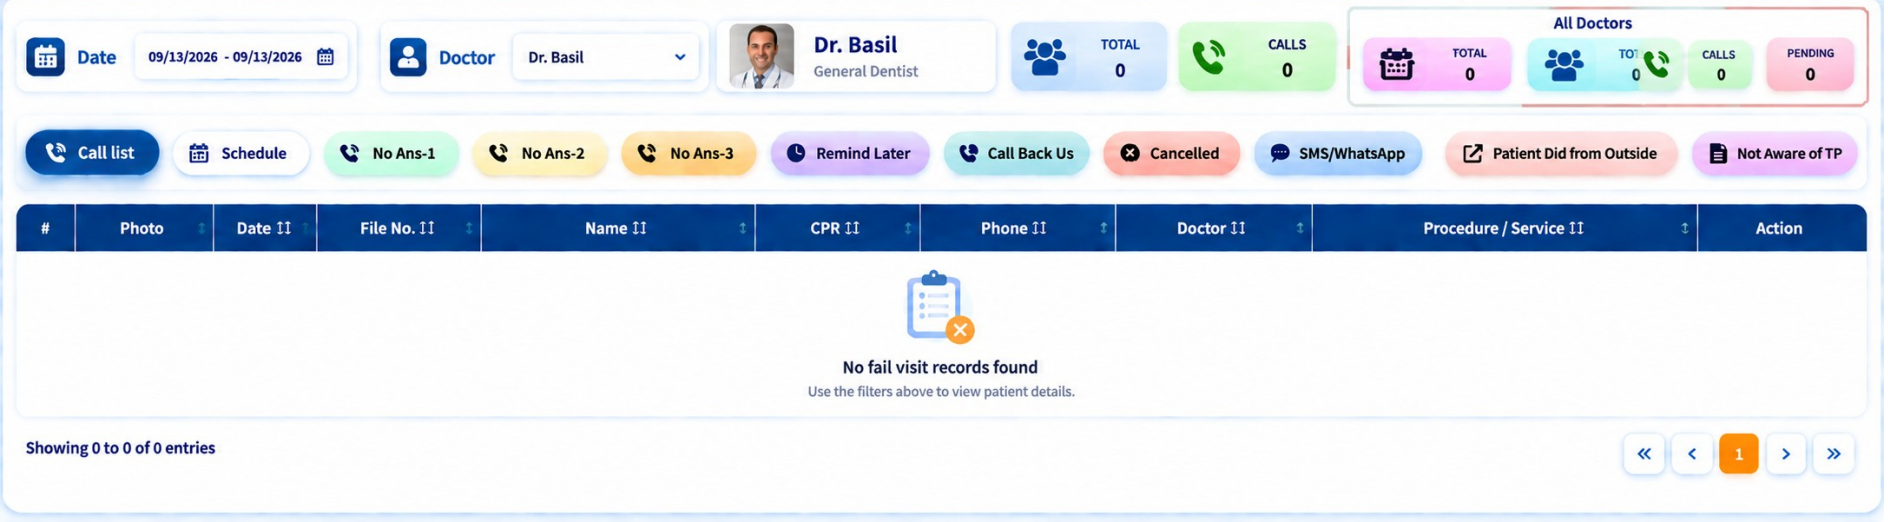

Figure 9 Fail Visit/FAIL VISIT.png

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

5 Ortho Tracker

Source Ortho Tracker/ORTHO TRACKER.xlsx Sheet1

Logic overview The Ortho Tracker monitors ongoing orthodontic patients by doctor and treatment category, showing today's reviews, reviews completed till date and pending reviews. Patients are grouped by the time since their last review—from one month to more than six months—so reception can identify overdue patients and continuously track calls, statuses and comments. Reception can save follow-up outcomes and book appointments directly, with patient counts and review status updating automatically as appointments and completed visits are recorded.

ORTHO-01 List all patients whose orthodontic procedure is still In Progress. Provide global file, CPR, phone or name search and a Date Filter. Clicking a doctor shows only that doctor's patient details; show doctor photographs and running-patient counts as in the model.

ORTHO-02 Provide an expandable Total Running PT area. Show Special, Normal, Invisalign, Illusion and Outside counts, each opening the matching started-braces patient list.

ORTHO-03 Show Today Review, Till Date Review and Review Pending counts. Define the qualifying review event and the default till-date period before implementation.

ORTHO-04 Provide 1 Month, 2 Month, 3 Month, 4 Month, 5 Month, 6 Month and Above 6 Months buttons. Each lists patients based on the last visit. Agree exact age ranges and prevent accidental overlap at month boundaries.

ORTHO-05 Provide Call List and status counts for Schedule, No Answer 1, No Answer 2, No Answer 3, Call Back, Debonded From Outside and Cancelled. Update these counts when Reception saves a call-list status.

ORTHO-06 The call-list fields are SL No., Date, File No., Patient Photo, PT First Name, Doctor Photo, Receptionist, Status, Comment, Save and Appointment. Attribute status updates to the logged-in receptionist. Comments are editable text.

ORTHO-07 The separate status master in cells Q45 to Q54 lists Schedule, No Ans 1, No Ans 2, No Ans 3, Remind Later, Call Back Us, Cancelled, SMS or WhatsApp, Patient Did From Outside and Not Aware TP. This differs from the Ortho-specific count buttons and model. Preserve both lists for clinic confirmation; do not replace Debonded From Outside silently.

ORTHO-08 The workbook and model both incorrectly label the heading Fail Visit. This module must be titled Ortho Tracker. The embedded doctor illustration is a visual reference, not an additional login.

Ortho Tracker visual reference 1

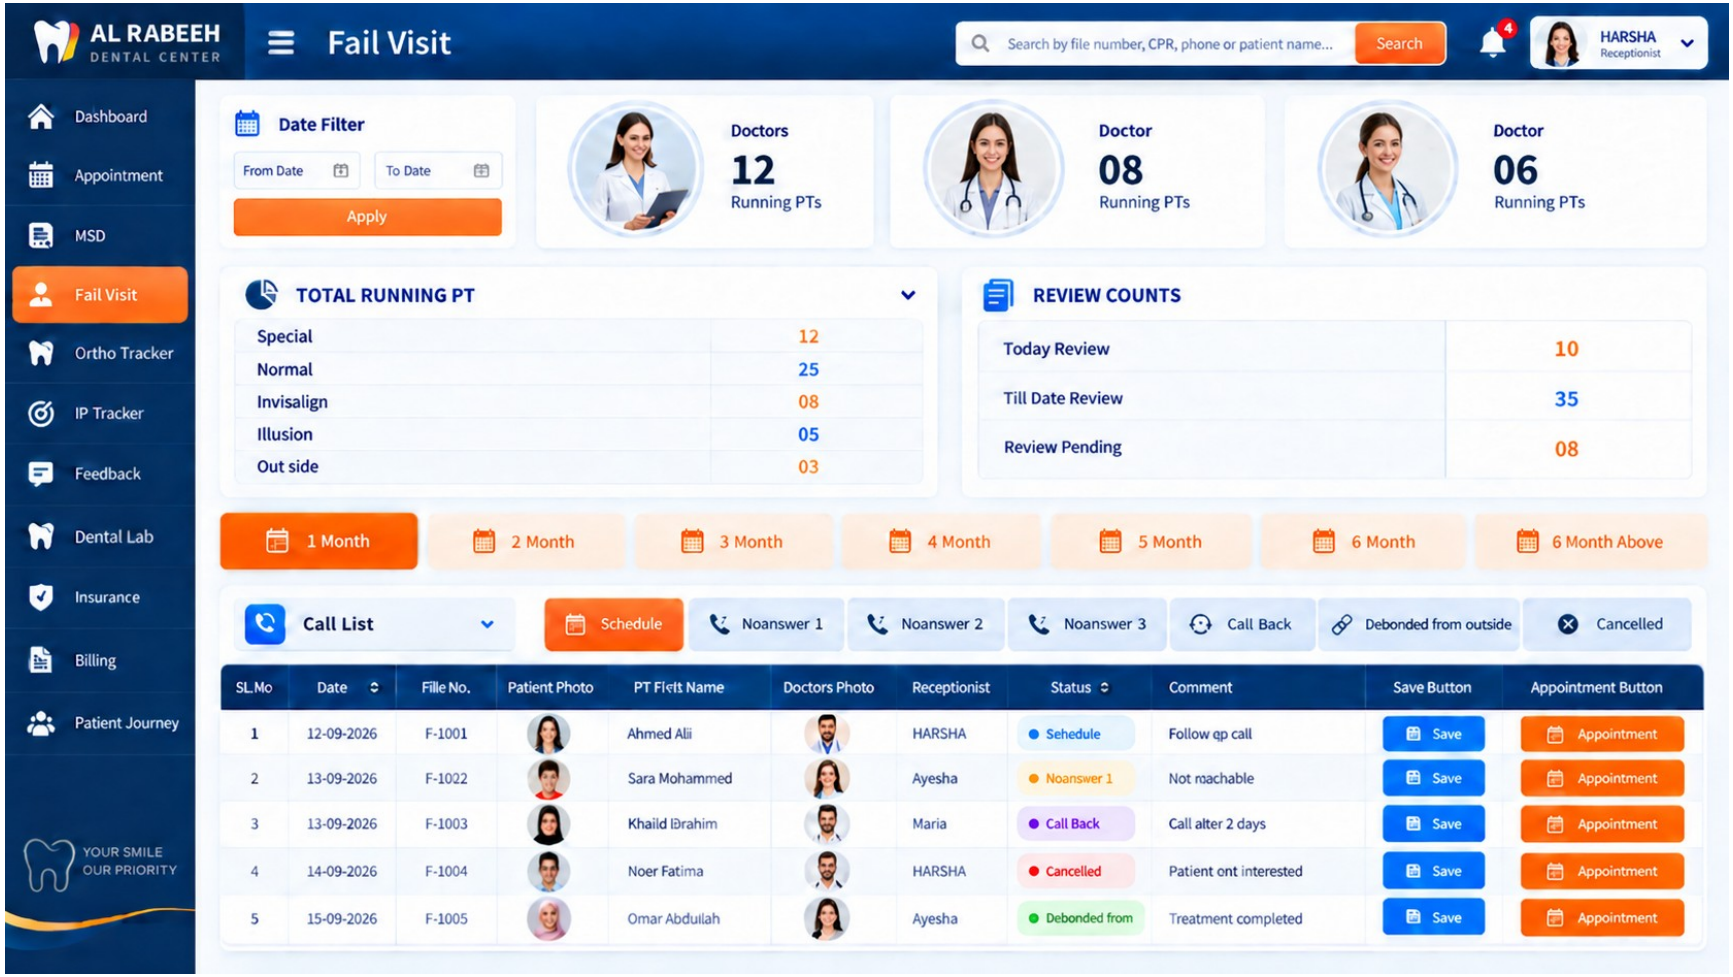

Figure 10 Ortho Tracker/ORTHO TRACKER RECEPTION.png

Reference heading says Fail Visit. Final heading must be Ortho Tracker. See ORTHO-08.

6 TP Tracker

Source TP Tracker/tp tracker.xlsx Sheet1

Logic overview The Treatment Plan (TP) Tracker automatically lists patients who have a pending treatment plan, no treatment marked “In Progress” and no further active appointment booked, with all three conditions required for inclusion. Reception can filter by date, doctor or procedure, record continuous call follow-ups, update statuses and comments, and book appointments directly. Once treatment moves to “In Progress” or a further appointment is booked, the patient leaves the active call list while their follow-up history is preserved and counts update automatically.

TP-01 Provide Treatment Plan Tracker with global file, CPR, phone or name search, Date Filter, Doctor Filter and selected-doctor photograph. Provide procedure filtering. Include a patient in the active call list only when all three conditions hold: a pending treatment plan exists; no treatment is In Progress; and no further active appointment is booked. When treatment becomes In Progress or an appointment is booked, remove the patient from the active list, preserve follow-up history and refresh counts automatically.

TP-02 Show Total TP List Count for patients meeting all three active-list conditions in TP-01 and Pending Call Count for those not called from that list. Counts follow the selected date filter and update automatically.

TP-03 Show Total Treatment Plan Value and Total Treatment Plan Value Done for the selected date filter. Define qualifying plan states, completed value attribution and duplicate-plan handling before implementation. Display currency in BHD.

TP-04 Provide Favorite TP Patients based on the doctor's favorite selection. Reception consumes the doctor's selection; this document does not define the full Doctor favorite-editing screen.

TP-05 Periodic Scaling: list patients who completed Scaling and Polishing six months before. Periodic GBT: list patients who completed GBT Airflow Cleaning or GBT Perioflow Cleaning two months before. Periodic Whitening: list patients who completed whitening six months before. Confirm whether the rule means the exact interval or everyone overdue beyond that interval.

TP-06 Extraction Without Implant: list patients who completed Normal Extraction or Surgical Extraction. The category title implies no implant, but the note does not specify an implant exclusion. Confirm the tooth-level matching and eligibility rule.

TP-07 RCT Without Crown: list patients who completed RCT or Premium RCT and have not completed a crown on the same tooth. Match procedures by patient and tooth. Confirm how outside crowns, pending crowns and multi-tooth procedures are handled.

TP-08 The model adds Ortho and Implant category cards beyond the five Excel categories. Include them as visual-source requirements with eligibility rules pending confirmation.

TP-09 Provide Call List and count buttons for Schedule, No Ans 1, No Ans 2, No Ans 3, Remind Later, Call Back Us, Cancelled, SMS or WhatsApp, Patient Did From Outside and Not Aware TP. Refresh counts after status updates and show the matching patient list when clicked.

TP-10 Call-list fields: SL No., Date, File No., Patient Photo, PT First Name, Doctor Photo, Receptionist, Status, Comment, Save and Appointment. Assign the logged-in receptionist on a status update. Allow text comments and patient-linked appointment booking.

Treatment Plan Tracker visual reference 1

Figure 11 TP Tracker/TP TRACKER RECEP.png

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

7 Feedback

Source Feedback/FEED BACK CALL-reception.xlsx Sheet1

Logic overview The Feedback Call Tracker lists patients due for follow-up after treatment so reception can check their recovery, satisfaction and concerns, with filters by date, doctor and call status. Each call is recorded as Pending, Done, No Ans 1, No Ans 2 or No Ans 3, with separate doctor and reception comments and a preserved call history. Summary counts and percentages update automatically, and reception can book a review appointment directly when further attention is required.

FB-01 When a doctor marks specified procedures In Progress or Completed, the patient appears in the Feedback Call list. Agree the procedure master, timing and whether each procedure or each encounter creates a feedback item.

FB-02 Default the Date Range and patient list to Today. Provide Doctor Filter and File Search. The model also shows a status filter and global search by file, patient name, CPR or phone.

FB-03 Show Today's Total PT to Call, Call Done, No Answer 1, No Answer 2, No Answer 3 and Pending Calls. Clicking each status count shows its patient details. The model labels Total Patients as This Month while the Excel requires Today; implement Today by default and resolve the model-label conflict.

FB-04 List SL No., Date, Doctor, File No., Patient Name, Patient Photo, CPR, Contact Number, Procedure, Status, Doctor Comments, Reception Comments and Appointment.

FB-05 Reception can record Pending, Done, No Ans 1, No Ans 2 or No Ans 3 and preserve each call in the history. Doctor comments are view-only for Reception. Selecting Done enables Reception comments. Keep Doctor and Reception comments separate.

FB-06 Appointment opens the booking Calendar for that patient when further attention is required. Support pagination and automatically update summary counts and percentages as calling statuses change.

Feedback visual reference 1

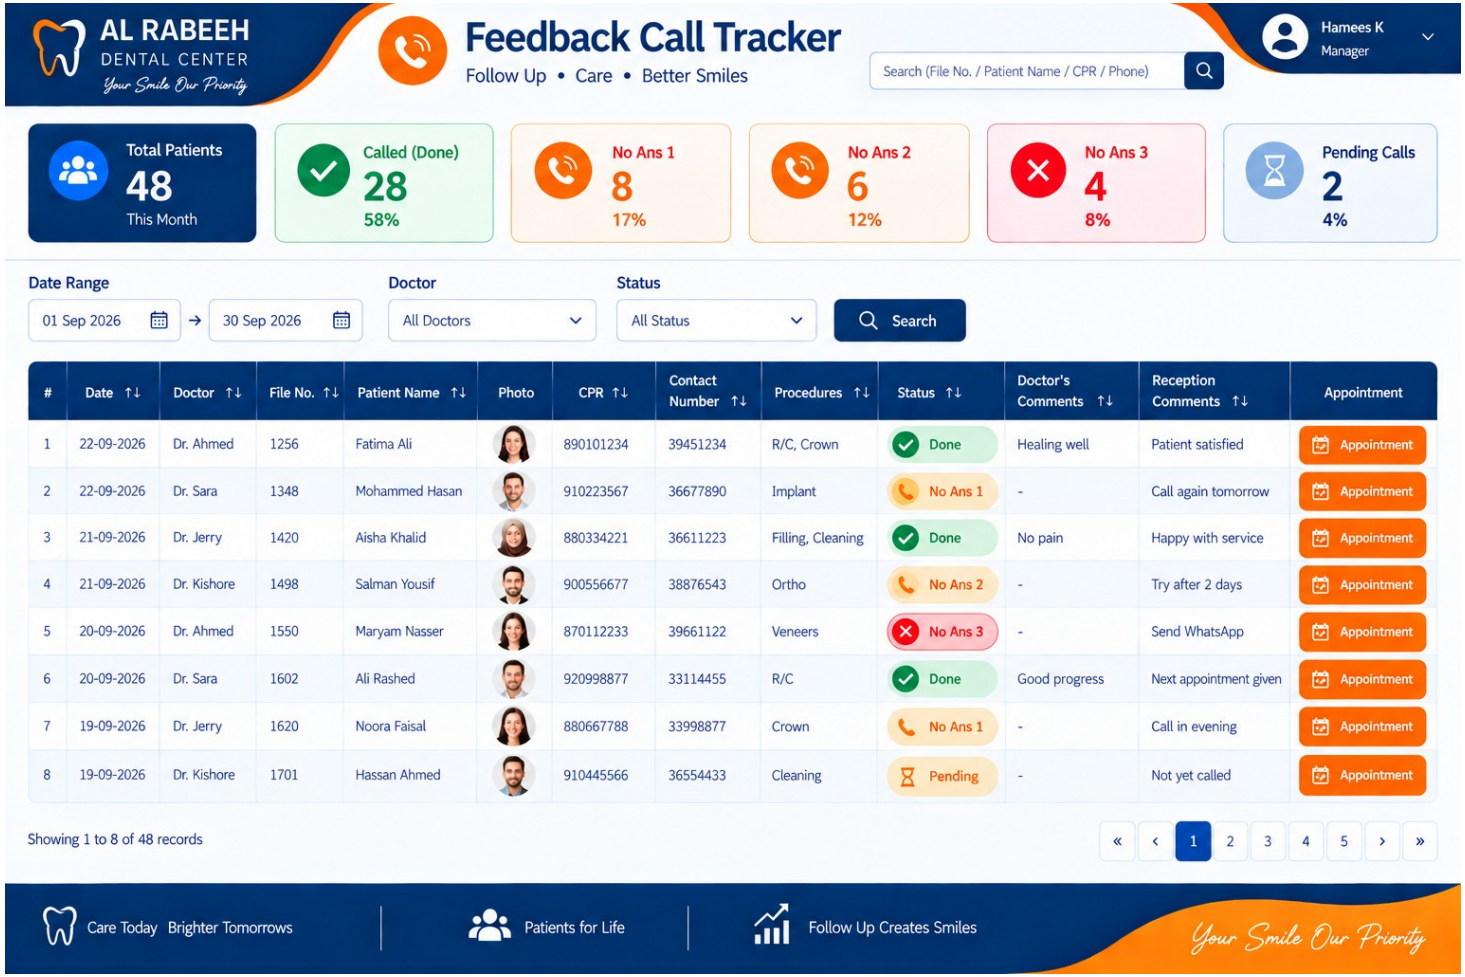

Figure 12 Feedback/FEDDBACK CALL RECEPTION.png

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

8 Lab

Source Lab/Lab.xlsx all four sheets

Logic overview The Lab Module tracks each patient's lab job through Ready to Dispatch, Check Work and Work Ready, recording dispatch details, expected receiving date, lab status and emergency priority, with doctor filters and search by file number, job number or patient name. Once a job is marked Work Ready, reception can contact the patient, record Schedule or No Ans 1/2/3, and book the required appointment while preserving follow-up history. Each job includes a shared chat between the doctor, reception and lab for instructions and updates, with options to maximize or minimize the chat.

LAB-01 Job order creation defaults Date to its creation date and includes Dental Lab Name selection. Show Emergency, Trial, Call Doctor and Technician Appointment options. The source misspells Trial and Doctor; retain the intended labels.

LAB-02 Allow photo attachments. Record upper impression-tray count, lower impression-tray count, lab analog count, impression-coping count and Other item count.

LAB-03 Offer Scanned Impression and Normal Impression. If Scanned Impression is selected, ask for the scan number.

LAB-04 Select Procedure must list all In Progress lab-related procedures for the patient. The selected-procedure area includes Procedure, Tooth Number, Shade Master with Gingival, Body and Incisal values, and Shade Photo attachment. Include Remarks and Save.

LAB-05 Provide three linked stages: Ready to Dispatch, Check Work and Work Ready. Across them, include Doctor Filter, search by File, Job No. or Name, clinic logo, user identity and login or logout.

LAB-06 Ready to Dispatch fields: Send Date, File Number, Job Number, Patient Name, Doctor Photo and Expected Receiving Date. Include Emergency, View and Dispatch actions. Record the action date.

LAB-07 Check Work adds Lab Status and a Work Ready action to the same basic fields, with Emergency and View. When Expected Receiving Date is overdue, show a red alert. Record the action date.

LAB-08 Work Ready includes Send Date, File Number, Job Number, Patient Name, Doctor Photo, Expected Receiving Date, Lab Status, Emergency, Staff Name, Status and Appointment. Provide Schedule, No Ans 1, No Ans 2 and No Ans 3 status controls.

LAB-09 Every stage includes a chat area with maximize and minimize controls. The drawings specify Doctor, Reception and Lab lanes. Link messages to the correct job and author. Agree how Lab contributes without adding a fourth top-level login, since only Reception, Doctors and Administration are currently authorized.

LAB-10 The Ready to Dispatch model highlights Work Ready although its table contains Dispatch. Preserve stage-specific actions from Excel and correct the highlighted tab in the final UI. Confirm who may create, dispatch, check or mark work ready.

Dental Lab visual reference 1

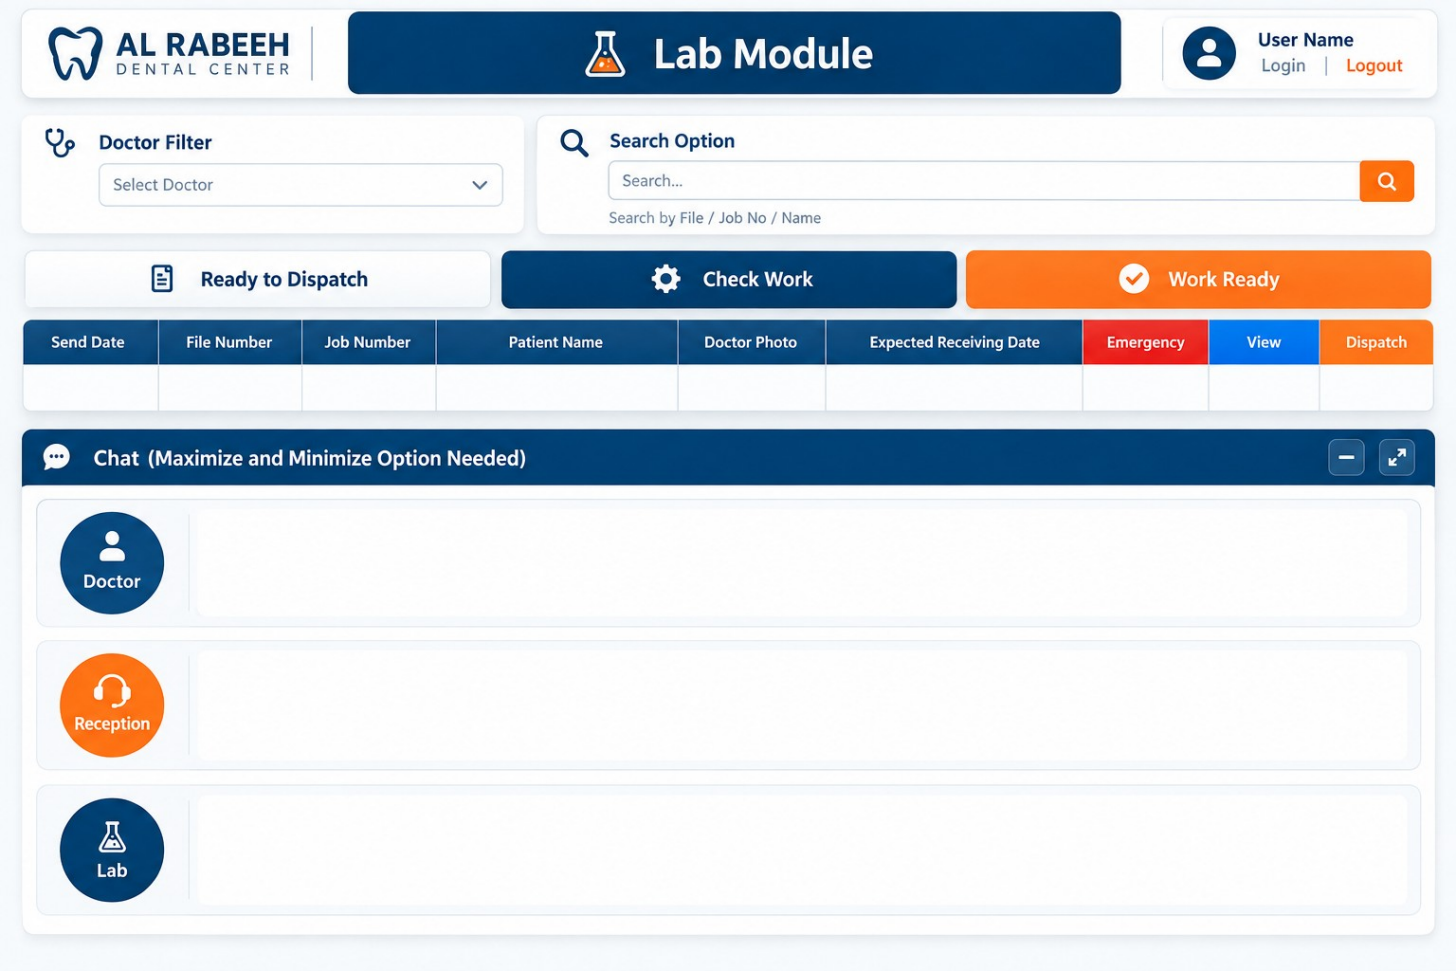

Figure 13 Lab/LAB-Ready to despatch.png

Reference highlights Work Ready while showing Dispatch actions. See LAB-10 for final stage behavior.

Dental Lab visual reference 2

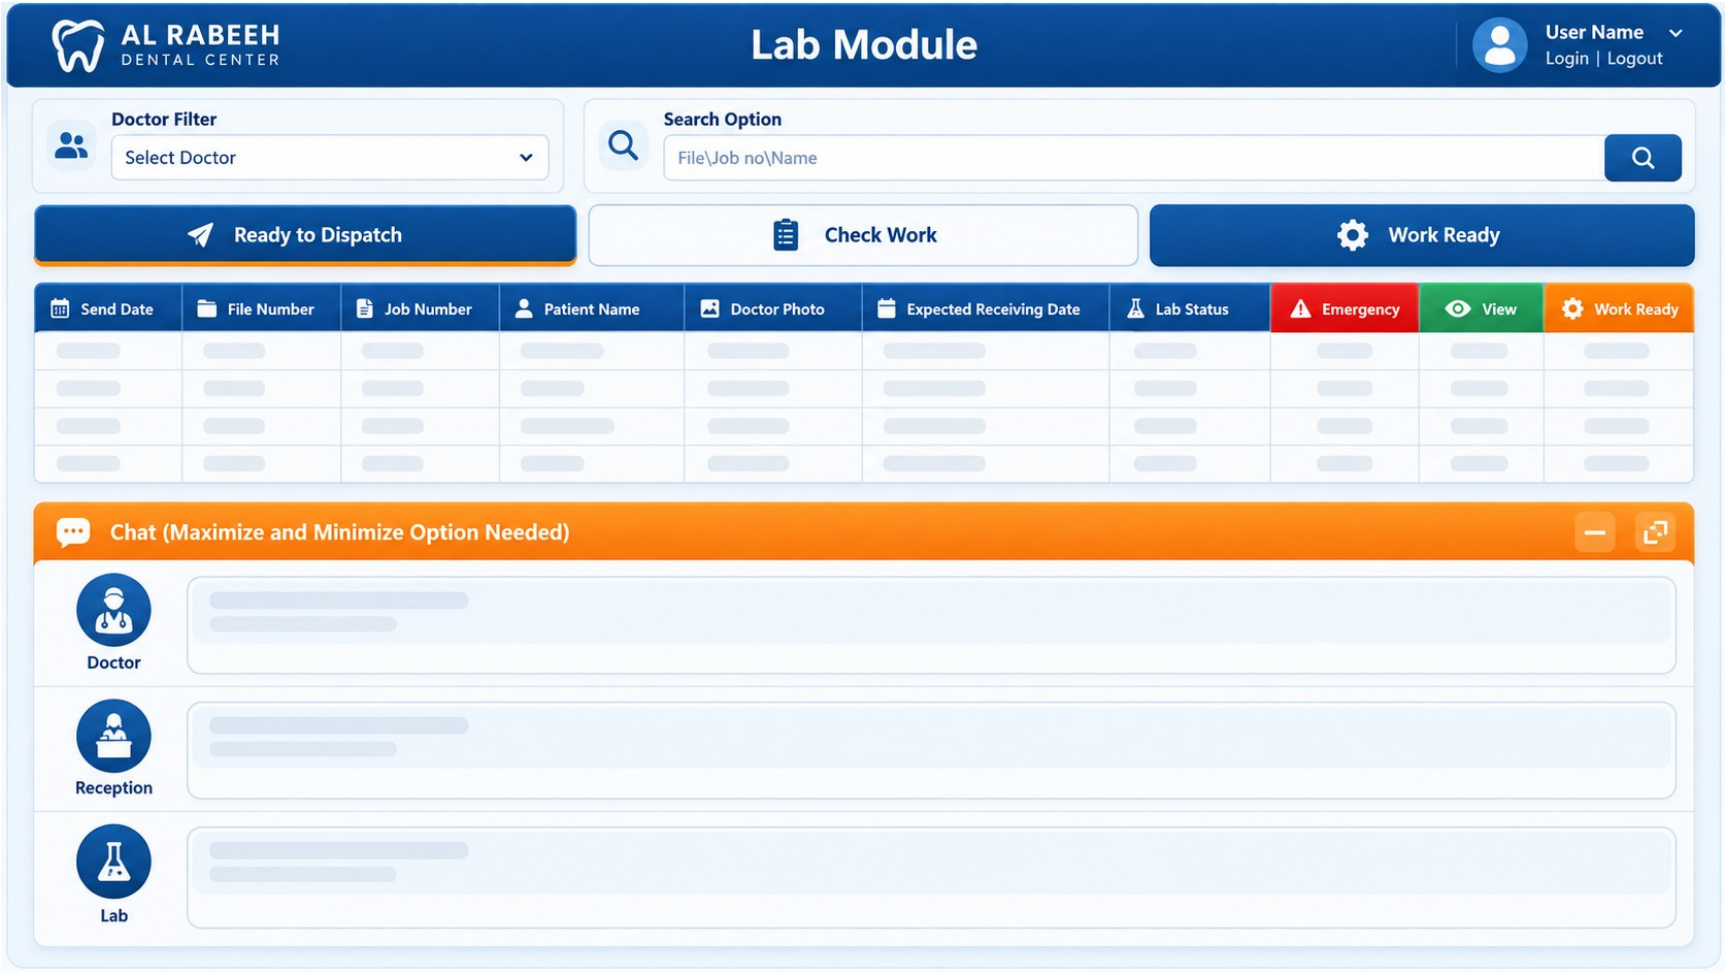

Figure 14 Lab/LAB-Check work.png

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

Dental Lab visual reference 3

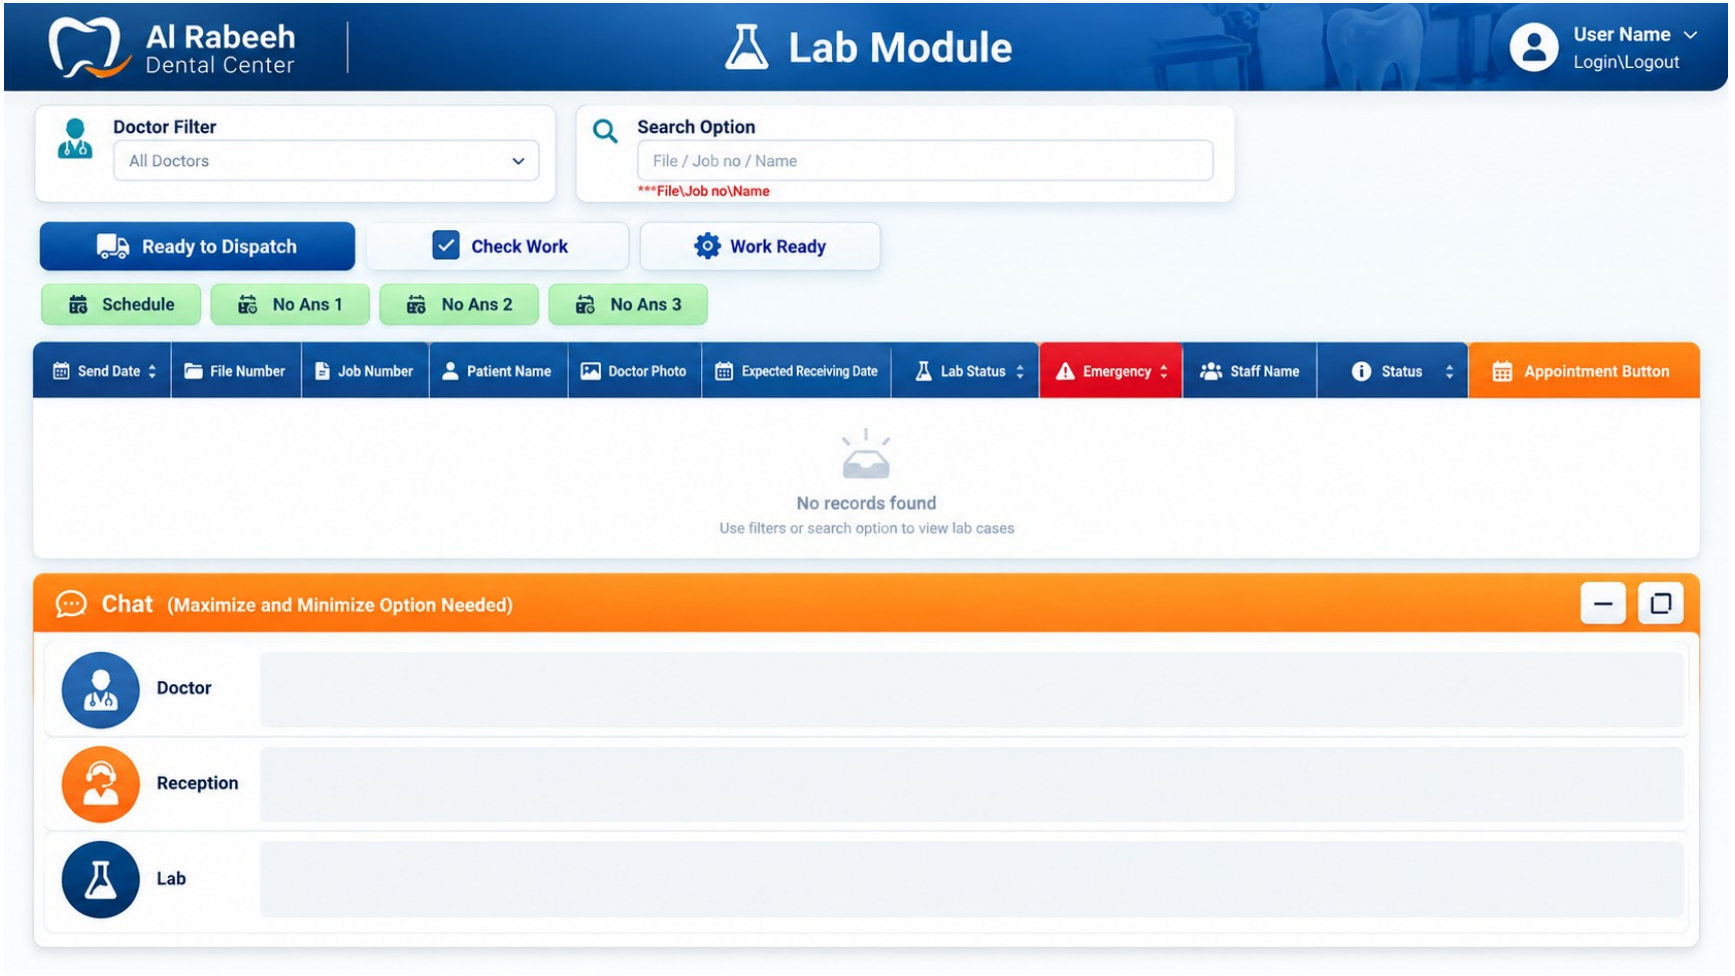

Figure 15 Lab/LAB-WORK READY.png

Read this layout together with the module requirements. Sample data and labels do not override explicit workbook rules.

9 Insurance

Source Insurance/Insurance.xlsx all three sheets

Logic overview The Insurance Module organizes patient claims by month and insurance provider, showing policy details, procedures, invoices and supporting attachments, with claim amounts calculated as gross minus discount minus patient deductible. Each claim progresses through Not Submitted, Submitted and Payment Received, with summary counts updating automatically and the payment button recording insurer payments against the claim. The submission screen compiles the selected month's claims and documents for review, with options to export to PDF or Excel and print.

INS-01 Provide Insurance Tracker and Insurance Submission screens with logo, user identity, login or logout and global file, CPR, phone or name search.

INS-02 Insurance Tracker filters by Month and Insurance and provides File Search. Include Not Submitted, Submitted and Payment Received status cards, patient statuses and a Pay button.

INS-03 Tracker fields: SL No., Date, Patient Name, File No., Policy No., ID No., Insurance, Sub Company, Doctor, Invoice No., Procedure Name, Tooth Number, Gross Price, Discount, Net Price, Deductible, Net Receivable, Status and Payment. Support multiple procedure rows under one patient invoice with invoice totals.

INS-04 Insurance Submission provides Insurance selection and Month Filter. Generate an insurer-specific submission heading with insurer name and month. The workbook demonstrates Globemed and Mednet formats.

INS-05 Globemed submission includes all core tracker financial and identity fields, plus Invoice PDF, Claim Form, CPR, Approval Paper, Signed Invoice and X-ray attachments. Mednet uses Mednet Auth Number instead of Policy No. and includes Invoice PDF, Claim Form, CPR, Approval Document and X-ray. Do not silently remove the Globemed Signed Invoice column because it is absent from the Mednet example.

INS-06 Provide attachment actions per invoice or claim. Include grouped procedure lines, invoice totals and the overall Net Total. Provide PDF, Excel and Print specifically for Insurance Submission.

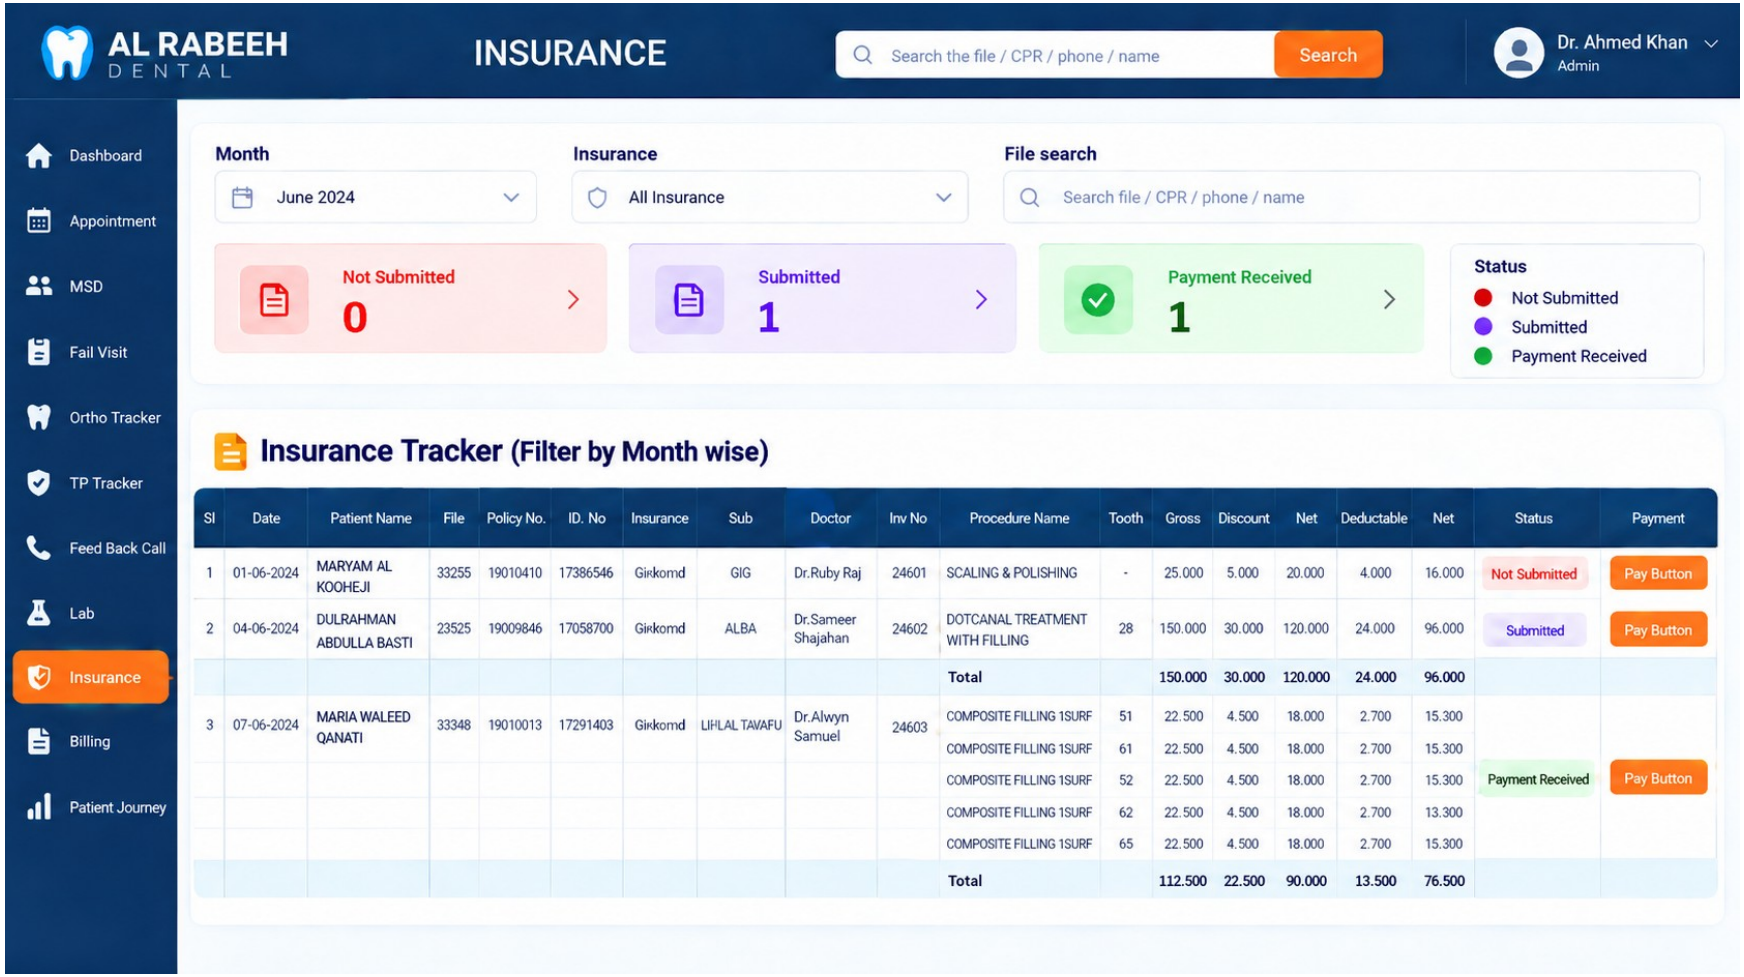

INS-07 Financial definitions from the sheet: Discount = Gross Price minus Net Price; Deductible = Net Price multiplied by the policy deductible percentage; Net Receivable = Net Price minus Deductible. Sum procedure amounts once into invoice totals and sum invoice totals once into submission totals.

INS-08 The examples use deductible rates of 20 percent and 15 percent and invoice examples use a 20 percent discount and 50 percent deductible. Treat these as examples, not fixed rates for all patients. Support policy or claim-specific percentages and agree the rounding rule.

INS-09 Insurance Invoice format: clinic logo, Date, Bill No., Patient Name, File No., Doctor, Insurance, Policy, Policy No., ID No., Procedure Name, Price, Amount After Discount, Deductible, Net Receivable, totals and Company Seal. Amount After Discount means Net Price. For Mednet, support its authorization reference in the appropriate output field.

INS-10 Keep insurance receivables separate from patient deductible payments. Confirm Pay behavior, partial receipts, payment references, submission status transitions and the relationship to Billing. Use the source sample records only as layout and calculation examples.

Insurance visual reference 1

10 Patient Journey

Source Patient Journey/PT Journey.xlsx Sheet1

Logic overview The Patient Journey automatically lists all visits marked Seen, ordered by the actual Seen time, with the earliest seen patient at the top and later patients below. It acts as an evaluation checklist and reminder, showing whether required items—appointments, account details, treatment plans, consents, instructions, photos, screening, notes and feedback—are completed, missing or not applicable. Completed items appear in green and missing required items in red, helping the responsible doctor and receptionist identify and correct gaps, with updates reflected automatically.

PJ-01 This is an evaluation checklist and reminder to identify areas needing correction. Automatically list all visits marked Seen, ordered by actual Seen time, with the earliest at the top and later visits below.

PJ-02 Provide logo, user identity, login or logout and global file, CPR, phone or name search. The model includes From and To dates and Search.

PJ-03 Columns: Date, Name, File, CPR No., Doctor, Reception, Service, Appointment, Account Details, Treatment Plan, General Consent, Treatment Consent, Instruction Sheet, Instruction, PFE, Financial Agreement, Before Photo, After Photo, Initial Screening, Chief Complaint, FLP Note, Instagram, Google Review and Feedback.

PJ-04 Appointment must show a tick when an appointment exists; when there is no appointment, provide a booking button. Agree whether this means a future appointment and which appointment types qualify.

PJ-05 The visual model additionally contains Initial Complaint and Complaint alongside Chief Complaint. Preserve these as model-only fields for confirmation rather than combining them silently.

PJ-06 Automatically reflect completion, missing required items and not-applicable states in the checklist. Show completed items in green and missing required items in red, with direct links to underlying records, photos, social activity and feedback. Display responsible doctor and receptionist details and photographs as illustrated. Define PFE and FLP with the clinic.

11 Billing/Accounts

Source Billing/Billing.xlsx Billing

Logic overview The Accounts/Billing screen displays bills created through the logged-in receptionist’s account, automatically recording their name under Billed By. Each entry shows the patient, doctor, bill number, insurance amount and payment breakdown by Cash, Credimax, Cheque and EazyPay, with date filters and patient search. Totals are calculated automatically for the displayed records, and the billing report can be printed with the receptionist’s name and signature area.

BILL-01 Display only bills created through the logged-in receptionist's account, and automatically record that receptionist under Billed By. Provide the clinic logo, user name, login or logout, Date Filter and global File, Phone, CPR or Name search.

BILL-02 Billing register fields: Date, Bill No., Billed By, Doctor, File No., Patient Name, Insurance Type and Amount, Cash, Credimax, Cheque, Eazypay, Payment Method and Total in BHD. Support the visible payment-mode grouping.

BILL-03 Calculate totals automatically for the displayed records from numeric Cash, Credimax, Cheque and EazyPay payment amounts. Payment Method is a descriptive label and must not be added as a numeric amount. Display the insurance amount separately.

BILL-04 Provide Print and Receptionist Name and Signature. The model shows name and signature lines and Total in BHD to three decimal places. Use decimal arithmetic and agreed three-decimal BHD rounding.

BILL-05 Keep insurance receivables distinct from cash received. Connect Billing and Collection without double-counting the same receipt, and retain the logged-in receptionist filter when totals or print output are generated.
